JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 172 1952

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron, when present, are included in the title; iron, when present, is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: " Iron–silicon–carbon alloys " and " iron–chromium–nickel–carbon alloys."]

Abrasives, coated-paper, for cleaning strip, 241 ; effect on paint, 354 ; liquid, for machining, 241, 442 ; in vapour-blast cleaning, 120

Absorptiometric Analysis, determination of lead and vanadium, 125 ; determination of tungsten in steel, 413 (*Paper*) ; of oxide residues in steel, 461

Adhesion, copper to steel, 242 ; indium in impact, 246 ; non-metallic, 246

Africa, iron ore in Sahara, 101

Ageing, effect of cold work, 122 ; effect on mechanical properties of mild-steel plate, 143 (*Paper*) ; effect on plasticity, 357 ; effect on yield strength, 123 ; electrical-conductivity tests, 357 ; iron, 123 ; mild steel, 122, 450 ; quench, effect on strain ageing in iron, 301 (*Paper*) ; quench, of iron, 163 (*Paper*) ; strain, effect of quench ageing in iron, 301 (*Paper*) ; strain, effect of residual stresses in carbon steel, 369 (*Paper*) ; in wire drawing, 437

Air, pollution control, 462

Aircraft Parts, engine-ring hermetic welding, 351 ; plating and cleaning, 120 ; quality control, 462

Aircraft Steel, austenitic D.T.D. 247, 453 ; corrosion prevention, 361, 458 ; low-temperature, 452

Albion Malleable Iron Co., foundry plant, 436

Allegheny Ludlum Steel Co., hydrogen reduction in blast-furnace, 347

Alloy Phases, boundary relations, 125 ; determination, 457 ; ternary isoactive lines, 250 ; three-dimensional representation in ternary system, 359

Alloy Steel, analysis, 125 ; analysis by spectrochemistry, 363 ; brittle transformation, 456 ; carbide structure, 283 (*Paper*) ; Carilloy, 454 ; determination of niobium in, 252 ; effect of hydrogen on properties, 46 (*Discussion*) ; heat-treatment study, 122 ; spectra excitation, 363 ; Swedish, 454 ; weldability, 351 ; for welded structures, 454

Alloy Structure, electron microscopy, 124 ; intercrystalline corrosion, 251 ; research group, 148

Alloys, antimony–tin plating, 446 ; cadmium–copper plating, 243 ; chromium –copper plating, 445 ; copper–lead, as lubricant, 439 ; copper–phosphorus solder, 118 ; copper–tin plating, 121 ; iron-aluminium ferromagnetic superlattice, 457 ; iron–aluminium–cobalt–copper–nickel magnetic orientation, 450 ; iron–aluminium–nickel transformation and resistivity, 124 ; iron–boron autoradiography, 124 ; iron–carbon ageing study, 357 ; iron–carbon double diagram, 124 ; iron–carbon low-temperature properties, 452 ; iron–carbon quenching, 124 ; iron–carbon–silicon diagram, 124 ; iron–chromium, hydrogen diffusion, 454 ; iron–chromium–carbon equilibra, 250; iron–chromium–nickel carbon solubility, 249 ; iron–chromium–nickel, hot-strength factors, 453 ; iron–chromium –nickel passivity in alkaline media, 251 ; iron–cobalt cementation, 125 ; iron–cobalt–nickel, for glass/metal seals, 248 ; iron–copper wire rolling, 438 ; iron–copper–nickel emissivities, 345 ; iron–copper–nickel X-ray study, 359 ; iron–manganese equilibrium diagram, 457 ; iron–manganese, hydrogen diffusion, 454 ; iron–manganese phase boundaries, 125 ; iron–manganese–phosphorus diagram, 359 ; iron–nickel damping, 450 ; iron-nickel, elastic modulus and ΔE effect, 450 ; iron–nickel, hydrogen diffusion, 454 ; iron–nickel magnetic collapse, 123 ; iron–nickel martensite transformation, 250; iron–nickel, Permalloy, 358 ; iron–nickel phase boundaries, 125 ; iron–nickel rolled, magnetic anisotropy, 123 ; iron–nickel, Widmannstätten structure in meteorites, 125 ; iron–oxygen intergranular brittleness, 403 (*Paper*) ; iron–silicon crystal domain structure, 249 ; iron–silicon oxygen equilibria, 359 ; iron–silicon permeability, 450 ; iron–silicon–carbon thermal and microscopic study, 268 (*Paper*) ; iron – sulphur – carbon melts, 383 (*Paper*) ; iron–tungsten, 249 ; iron–tungsten phase boundaries, 125 ; lead–tin plating, 242 ; molybdenum–titanium phase boundaries, 125 ; niobium–titanium phase boundaries, 125

Alumina, effects in blast-furnace slag, 433

Alumina–Lime System, 434

Aluminium, in coremaking, 112 ; crystalline distortion by alternating stresses, 122 ; determination in steel and zinc by photometry, 126 ; diffusion into layered iron, 457 ; effect on graphitization, 355 ; electrodeposition, 446 : killing Bessemer steel, 248, 454 ; secondary, 364 ; sprayed, 446 ; sprayed, ethyl silicate doping, 243 ; sprayed, rusting on steel, 243 ; spraying on ships, 353 ; spraying on steel, 243 ; vapour-phase films, 446

Aluminium Plating, on steel, 243

American Foundrymen's Association, core-veining study, 112 ; grooved-pulley making, 112

Analysis, 125, 252, 363, 460 ; absorptiometric determination of lead and vanadium, 125 ; absorptiometric determination of tungsten in steel, 413 (*Paper*) ; absorptiometric, of oxide residues, 461 ; colorimetric determination of copper, 253, 363 ; colorimetric determination of molybdenum, 253 ; colorimetric micro-determination of molybdenum, 253 ; electrolytic determination of boron, 253 ; electrolytic determination of copper, 253 ; electrolytic separation of zinc from iron, 253 ; magnetic, of ores, 363 ; metallurgical, 363, 460 ; micro, 455 ; micro determination of molybdenum, 253 ; micro, in metallurgy, 252 ; photometric determination of aluminium in steel and zinc, 126 ; photometric determination of cobalt, 460 ; photometric determination of copper, 253 ; photometric determination of copper in pig iron and steel, 253 ; photometric determination of silicon and tungsten, 252 ; polarographic determination of oxygen consumption in corrosion, 360 ; polarographic principles and applications, 252 ; potentiometric determination of molybdenum, 461 ; spectrochemical calculator, 461 ; spectrochemical induction-heating source, 363 ; spectrochemical, of steel and zinc, 363 ; spectrographic controlled arc source, 252 ; spectrographic determination of manganese and silicon, 461 ; spectrographic determination of nickel, 125 ; spectrographic methods and apparatus, 460 ; spectrographic, of oil ash, 439 ; spectrographic, permanent magnets for, 125 ; spectrographic, in Russia, 461 ; spectrographic, of slags, 363 ; spectrographic, of steel, 252; spectrographic, of surfaces, 125 ; spectrographic two-component calibration standards, 125 ; spectrophotometers

Analysis—*continued*
calibration, 363 ; spectrophotometric determination of carbon, 363 ; spectrophotometric determination of cobalt in ultraviolet, 461 ; spectrophotometric determination of molybdenum, 363 ; spectrophotometric determination of nickel, 125 ; spectrophotometric determination of titanium, 461 ; spectrophotometric determination of vanadium in ultraviolet, 126 ; spectroscopic determination of magnesium, 461 ; spectroscopic determination of magnesium in nodular iron, 125; spectroscopic determination of phosphorus, 252 ; spectroscopic, in foundry, 125 ; spot, 126 ; X-ray fluorescent, 460
Analysis of, alloys, 125 ; alloys by spot tests, 126 ; chromized layers by spectrography, 125 ; ferrochromium, 126 ; iron ores, 126 ; moulding sand, 348, 434 ; oil ash, 439 ; oxide residues in steel, 461 ; slags by spectrography, 363 ; steel by spectroscopy, 252 ; steel and zinc by spectrochemistry, 363
Annealing, of boiler plant, 238 ; continuous, of strip, 437 ; electrical-resistivity change in, 451 ; gaseous, 236 ; malleable iron, 111, 236 ; stress relief in welds by, 441
Annealing Furnaces, bell-type, 114 ; Grünewald, for strip, 238 ; pulverized-fuel-fired, 236 ; radiant-tube heated, 236 ; recarburizing, 437 ; for strip, 238 ; tunnel-type, 236 ; for welded parts, 238
Anodizing, ball-pen caps, 121
Antimony–Tin Plating, 446
Appleby-Frodingham Steel Co., Footner process for structural steel, 446 ; iron-ore drying, 231 ; maintenance, 127 ; mixer-practice development, 184 (*Paper*) ; rolling-mill lubrication, 239 ; supply and use of hydraulic power, 87 (*Discussion*), 314 (*Discussion Corrigenda*)
Arc Furnaces. *See* Electric Furnaces
Arc Welding. *See* Welding
Argon, visibility in Schlieren process, 351
Armco Steel Corp., spectrochemical analysis 363
Arwood Precision Casting Co., investment casting, 349
Austenite, carbon diffusion, effect of cobalt, 250 ; carbon solubility in, 249 ; grain-size effect on creep, 249 ; formation in case-hardened steels, 457 ; growth in cold-rolled tempered martensite, 359 ; in low-carbon iron, 457 ; nucleation period in cooling, 359 ; residual, effect of quenching temperature, 250 ; retained, 457 ; transformation to bainite, 307 (*Paper*)
Australia, manganese-ore treatment, 102
Austria, iron and steel production figures, 461 ; rolling mills, 116
Automobile Industry, coach painting, 446
Automobile Parts, body finishing, 444, 446, 447 ; bumper electroplating, 444 ; crankshaft-journal hardening, 115 ; door pressing, 238 ; exhaust-pipe ceramic coatings, 353 ; exhaust-valve materials, 248 ; finishing, 447 ; piston-ring plating, 242 ; rocket-motor, heat-treatment, 114, 237 ; spring torsional-fatigue, 245 ; steering-assembly heat-treatment, 114 ; tube welding, 440

B.S.A. Co., Ltd., investment casting, 349
Babcock and Wilcox, Ltd., research laboratories, 249 ; tube extrusion, 437
Bainite, formation, 307 (*Paper*)
Bearings, failure indication by oil-ash analysis, 439 ; grey cast iron, 454 ; oil-less, grey-iron growth, 453 ; powder-iron, 243 ; roll-neck hydrodynamic lubrication, 415 (*Paper*) ; roll-neck, lubrication, 117
Belgium, foundry organization compared with U.S.A., 436
Bend Tests, axial-load, 245 ; on shafts by Mohr's method, 448
Benjamin Electric Ltd., vitreous enamelling lamp reflectors, 447
Bentonite, Saskatchewan, 101 ; shale deposits in New Zealand, 231
Bessemer Converter. *See* Converters
Bessemer Gold Medal, award for 1952, 25
Bessemer Process, acid, duplexing with open-hearth, 107 ; basic, dephosphorization in, 106 ; duplexing with open-hearth, 107 ; lime calculations, 106 ; mechanical handling in, 348 ; oxygen in, 106 ; oxygen and limestone chips additions, 106 ; triplexing with cupola and electric furnace, 111
Bessemer Steel, basic, killing with Si and Al, 248, 454 ; effect of oxygen-enriched air, 106 ; low-nitrogen low-phosphorus production, 234 ; rivet, killed, 248 ; structural, killed, 248
Bethlehem Steel Co., blast-furnace brick variations, 233
Bicycles, finishing in Japan, 447
Biographies, *frontispiece*, also to face 128, 256, 368 ; contributors to *Journal*, 98, 228, 341, 428
Bits, filler-weld metal, 118 ; hard-metal, 101
Blast-Furnace, 105, 234, 346, 433 ; carbon hearths, 347 ; constructional lifting equipment, 438 ; developments in nineteenth century, 364 ; early, at Maryport, Cumberland, 162 (*Note*) ; experimental, in Brazil, 105 ; high-top-pressure operation, 346 ; high-top-pressure operation in Britain, 234 ; high-top-pressure operation at Republic Steel, 234 ; low-shaft Humboldt, 105 ; low-shaft research, 433 ; oxygen-enriched air, effect on combustion zone, 346 ; oxygen in, 105 ; performance assessment, 234 ; photographic study through tuyeres, 105 ; quenched, study, 347 ; refractories size variation, 233 ; shell deformation in welding, 241 ; shell welding, 241 ; tap-hole, 234
Blast-Furnace Gas, cleaning-plant silicon carbide liners, 346 ; composition in relation to furnace performance, 105
Blast-Furnace Plant, blower pulsation, 117; blower specifications, 346 ; gas-turbine blowers, 105 ; high-pressure blowers, 234 ; mechanical handling, 345 ; at Seraing, 346 ; silicon carbide refractories, 346
Blast-Furnace Practice, 105, 234, 346, 433 ; blowing-in abandoned furnace, 347 ; in Czechoslovakia, 105 ; ferromanganese, 109; ferromanganese production from open-hearth slag, 235 ; with high-magnesia slags, 346 ; at Sheffield Steel Corp., 346 ; spiegeliesen production, 235 ; tap-hole, 234
Blast-Furnace Process, CO_2 decomposition, 433 ; desulphurization, 346 ; effect of carbon on iron/slag interface tension, 234 ; gas composition in relation to furnace performance, 105 ; hydrogen and oxygen in, 105 ; metal/slag equilibrium, 346 ; photographic study through tuyeres, 105 ; reduction equilibria, 433 ; reduction by hydrogen, 346 ; statistical analysis of data, 347 ; study of quenched furnace, 347
Blast-Furnace Slag, desulphurization by, 346 ; determination of sulphur by stoichiometric combustion method, 53 (*Paper*) ; effects of alumina, 433 ; equilibrium with metal, 346 ; foamed, 433 ; glass content, 433 ; high-magnesia, 346 ; interface tension with iron–carbon, 234
Blast-Furnace Stoves, replacement by metallic heater, 105 ; temperature measurement and control, 103

British Coal Utilization Research Association, methane in coal, 345
British Iron and Steel Research Association, absorptiometric determination of tungsten in steel, 413 (*Paper*) ; committee organization, 52 ; Constitution of Alloys Group, 148 ; experimental-mill lubrication, 415 (*Paper*) ; pyrometer-calibration furnaces, 103 ; steel-making conference, 347
British Rollmakers Corp., Crewe works, 436
British Welding Research Association. fatigue-testing laboratory, 449
Brittle Fracture, micromechanism in relation to impurities, 122 ; principles, 122 ; in structural steel, 448 ; tests, 122 ; in weldable structural steels, 122 ; of welded ship plate, 452
Brittleness, intergranular, in iron–oxygen alloys, 403 (*Paper*) ; low-temperature 453
Broaching, with reduced force, 443
Bronze-Chromium Plating, 121
Bronze, plating solution, 120
Buick Motor Co., coremaking machine, 348
Bullets, copper-clad steel, 242

Cadmium–Copper Plating, 243
Cadmium Plating, 446 ; replacement by Zincilate, 445
Calcium Carbide, desulphurization by, 106 ; production in electric furnace, 109
Calcium Ferrites, 434
Calcium Phosphates, free energies of formation, 61 (*Paper*)

Cambridge University, friction research, 450
Canada, bentonites, 101 ; coal deposits, 101 ; coal preparation, 102 ; hematite deposits, 101
Carbides, determination in Cr steels by magnetics, 253 ; iron–silicon, identification, 15 (*Paper*) ; particle-size determination by microscopy, 249 ; precipitation reagents in metallography, 124 ; structure in alloy steels, 283 (*Paper*)
Carbon, combustion research, 432 ; determination, 460 ; determination of dissolved in mild steel, by damping, 253 ; determination in ferrochromium, 363 ; determination by spectrophotometry, 363 ; determination in steel, 363 ; diffusion in austenite, effect of cobalt, 250 ; diffusion in iron alloys, 453 ; effect on acid resistance of titanium- and niobium-stabilized Cr–Ni steels, 377 (*Paper*) ; effect on iron/slag interface tension, 234 ; friction, 246 ; gasification by steam, 432 ; in hydrogen-treated cast iron, 453 ; precipitation in α-iron, 457 ; solubility in austenite 249. *See also* Refractory Materials
Carbon Monoxide, coke protection by cement coating, 109, 110 ; decomposition in presence of metal catalysts, 433
Carburization, continuous furnace, 437 ; liquid, 436 ; salt-bath, 437
Carpenter Steel Co., cold-hobbing die steel, 247
Case Hardening, austenite formation, 457 ; salt-bath, of Cr–Ni steel, 437
Cast Iron, chromium-modified, 249 ; composition and properties, 248 ; composition/properties relationships, 249 ; crystallization, 113 ; decarburization in, 453 ; desulphurization, 435 ; determination of manganese in, 253 ; determination of silicon and manganese by spectrography, 461 ; developments through research, 126 ; effect of cerium, 110 ; effect of tellurium, 454 ; enamels dilatometry, 354 ; fluidity, 235 ; grey. *See* Grey Cast Iron ; iron–silicon carbides identification, 15 (*Paper*) ; modified, castings specifications, 248 ; modified, in Poland, 248, 249 ; nodular. *See* Nodular Cast Iron ; pipes, 349 ; rolls production, 436 ; tensile testing, 243 ; testing, 243, 455 ; uses and developments, 235 ; vitreous enamelling, 236, 434 ; wear-resistant, 248 ; welding, 118
Cast Steel, effects of boron, 355 ; high-speed, 241 ; oxide inclusions, 237
Casting, basin, 113 ; " blowing " during, 236 ; centrifugal. *See* Centrifugal Casting ; feeder-head knock-off, 435 ; fluxes in, 113 ; ingots, 347 ; investment. *See* Investment Casting ; precision. *See* Precision Casting ; pulley, 112 ; testing by spiral mould, 112 ; vacuum, 436
Castings, chill, silicon inoculation, 110 ; chipping standards, 436 ; cleaning by wet blast, 349 ; defects, 237 ; defects causes, 237 ; defects classification and causes, 113 ; grey-iron. *See* Grey-Iron Castings ; heat-resisting, repair by welding, 118 ; heavy iron, production, 434 ; hot tearing, 113 ; hot-tearing test, 113 ; iron, repair by welding, 118 ; iron-roll, repair by welding, 118 ; from loam moulds, 349 ; machine-tool, defects, 237 ; malleable-iron. *See* Malleable-Iron Castings ; mass production, 435 ; modified-iron, specifications, 248 ; piping, in, 109 ; porous, sealing, 237, 436 ; quality production, 434 ; repair by Metalock process, 113, 462 ; repair by welding, 118 ; riser-feed formulae, 112 ; riser flame cutting, 352 ; risering, 435 ; risers for high pressures, 112 ; risers for malleable iron, 349 ; shrinkage and piping, 113 ; steel. *See* Steel Castings ; temperature distribution, 237 ; tumbling drums for, 111 ; vacuum impregnation, 113 ; wear-resistant, 248
Cathodic Protection, backfill material, 362 ; current requirements, 362 ; determination by potential measurement, 457 ; painted steel in sea water, 252 ; pipelines, 362 ; possibilities and limitations, 360 ; rectifier system for pipelines, 362 ; ships, 251, 362 ; of underwater equipment, 252
Cement, coke coating with, 109, 110
Cementation, in iron vapour-phase films, 359 ; processes mechanism, 444
Cementite, effect of cobalt, 125 ; grain-boundary formation, 250
Centrifugal Casting, mathematics and physics, 349 ; mould-stress determination, 113 ; theory and practice, 112
Cerium, effect on graphite in cast iron, 101 ; effects in steel, 454 ; as nodular-iron additive, 236
Chain, elastic elongation, 248 ; production by welding, 117 ; sling, 239 ; welded, inspection, 441
Chimneys, height, etc., calculation, 462
Chromite. *See* Refractory Materials
Chromium, in cast irons, 249 ; determination in ferrochromium, 126 ; distribution in chromizing, 125
Chromium Alloys, corrosion in H_2SO_4, 125
Chromium Carbide, precipitation in stainless steel, 250
Chromium–Cobalt–Tungsten Steel, composition for permanent magnetism, 123
Chromium–Copper–Nickel Steel, for low-temperature service, 452
Chromium–Molybdenum Steel, effect of cold drawing on creep resistance, 452 ; weld hardenability, 440
Chromium–Molybdenum–Nickel Steel, case-hardening, residual austenite in, 457 ; replacement by boron steel, 355 ; valve casting resistance to graphitization, 247
Chromium–Molybdenum–Silicon–Vanadium Steel, torsional relaxation, 122
Chromium–Nickel Steel, carbide-precipitation reagents, 124 ; case hardening, 437 ; chemical-industry applications, 455 ; effects of molybdenum on weldability and corrosion, 440 ; flame cutting, 442 ; heat-resisting, sigma-phase embrittlement in, 129 (*Paper*) ; martensite transformation, 359 ; passivity in alkaline media, 251 ; replacement by Cr steel, 248 ; sigma phase, 457 ; titanium- and niobium-stabilized, effect of carbon on acid resistance, 377 (*Paper*); welding metallurgy, 439
Chromium–Nickel–Tungsten Steel, tungsten replacement and conservation, 248
Chromium–Niobium Steel, inclusion identification, 456
Chromium Ore, working, 101
Chromium Plating, cutting-tool edges, 442 ; effects on steel properties, 445 ; hard, 242 ; piston rings, 242 ; thickness determination by spot test, 445
Chromium-Plating Solutions, Bornhauser, 121 ; fluorides and fluosilicates in, 445 ; indium sulphate addition, 445 ; waste, re-use treatment, 444
Chromium Steel, availability in U.S.A., 455 ; chemical-industry applications, 455 ; determination of carbides by magnetics, 253 ; flame cutting, 442 ; quenching curves, 457 ; substitution for Cr–Ni steels, 248
Chromizing, 242 ; effect on corrosion resistance of galvanized iron, 125 ; layer analysis by spectrography, 125
Clad Metals, characteristics, 120 ; processes, 242
Clad Steel, copper bonding, 242 ; copper bonding for bullets, 242 ; for corrosion-resistant liners, 455 ; stainless, production and treatments, 351
Cleaning, 119, 241, 352, 443 ; alkaline agents in, 443 ; amines as HCl inhibitors, 352 ; bath heating, 120 ; chipping standards, 436 ; before coating, 242 ; efficiency determination, 120 ; electrolytic, of ball-pen caps, 120 ; flame, 120 ; Hydroblast, of castings, 349 ; perchloric acid hazards, 352 ; sand blasting, 352 ; sand blasting large parts, 120 ; sanding machines, 447 ; spray rinsing in plating, 352 ; tumbler drums, 111 ; ultrasonic, 241 ; vapour-blast, 120 ; wet blasting, 241
Coal, applications 232 ; baking determination, 103 ; blending for coking, 103 ; calorimetry, 103 ; Canadian deposits, 101 ; classification, 102 ; cleaning, 102 ; coking and non-coking deposits, 344 ; coking studies, 232 ; coking, U.S.A. reserves, 343 ; cyclone washing, 344 ; dense-media washing, 102, 432 ; determination of sulphur in, 363 ; early use in English chafery, 313 (*Note*) ; feed control to gas producers, 257 (*Paper*) ; float-and-sink analysis, 102 ; flotation, 345, 432; gas production from tailings, 102 ; gasification in pulverized form, 432 ; gasification under pressure, 432 ; gasification underground, 232 ; low-grade, evaluation, 102 ; mechanical handling, 239 ; methane in, 345 ; Nyasaland deposits, 101 ; petrology, 102 ; plasticity determination, 103, 232 ; preparation, 102 ; preparation in Britain, America, and Holland, 345; preparation in Canada, 102 ; preparation in Wales, 232 ; pulverizer, 232 ; research, 102 ; Saar-Lorraine, 343 ; sampling, 102 ; slimes separation, 102 ; swelling behaviour, 103 ; swelling determination, 102, 345 ; swelling by methanol, 103 ; testing, 345 ; testing by dilatometer, 432 ; underground gasification, 232 ; washeries evaluation, 344 ; washing in India, 432
Coatings, ceramic, for high-temperature alloys, 353 ; ceramic, for stainless steel, 353 ; cleaning for, 242 ; diffusion, 444 ; electrical-resistance measurement, 459 ; electrodeposited. *See* Electrodeposited Coatings ; enamel. *See* Enamels ; lacquer sprayed, 446 ; organic, 243 ; 446 ; paint. *See* Paints; phosphate. *See* Phosphate Coatings ; pipeline, electrical-resistance determination, 361 ; plastic, 446 ; plastic tubular, 446 ; protective, 120, 242, 352, 443 ; protective metallic, 251 ; protective, for oil tanks, 459 ; protective, performance, 458 ; protective, for refractories, 233 ; scratch testing on white iron, 353 ; silicone, 243 ; thickness determination by magnetics, 445 ; vapour-phase aluminium, 446 ; vapour-phase deposition, 120, 444, 447 ; zinc, formation in galvanizing, 242

Stress Corrosion, 359 ; cracking of mild steel in nitrate solution, 149 (*Paper*) ; film-rupture mechanism, 251 ; gas-turbine materials, 247

Stress Relief, by flame hardening, 237 ; furnaces, 115 ; by induction heating, 437 ; weld, by annealing, 441 ; in welded structures, 440

Structural Steel, beam dead-load tests, 454 ; beam fatigue bending, 449 ; beams, plastic design, 356 ; Bessemer, killed, 248 ; cracking and brittle fracture, 448 ; descaling by oxy-acetylene flame, 443 ; galvanizing, 242 ; girder deformation by arc-weld contraction, 352 ; materials development, 248 ; protection by Footner process, 446 ; protection by sprayed metal coatings, 447 ; Russian and Czech types, 248 ; surface conditioning, 351 ; tensile tests, 244 ; in U.S.A., 461, 462 (*Book*) ; weldability testing, 351 ; weldable, brittle fracture in, 122 ; weldable, stress/strain, 247 ; welded-beam stress, 247 ; welded-girder annealing, 441 ; welded-girder fatigue strength, 441 ; welding, 351

Stuttgart University, 364

Styria, ores, 101

Sulphides, metal, volatility, 108

Sulphur, activity in liquid iron and steel, 434 ; corrosion of iron in, 360 ; corrosion in production, 360 ; determination in coal, 363 ; determination in coal and coke by reduction, 363 ; determination by combustion, 125 ; determination in slags by stoichiometric combustion method, 53 (*Paper*); distribution and control in steelmaking, 106 ; pick-up in steelmaking, 348 ; solid solubility in iron, 434

Sulphur Dioxide, reaction with liquid iron, 348

Sulphuric Acid, corrosion in, 458 ; corrosion of chromium alloys in, 125 ; corrosion-resistant materials, 361 ; rust-resistant steels for, 361

Supersonic Testing, boiler tubes, 358 ; echo apparatus, 123 ; flaw detection, 123, 246 ; forgings, 358 ; by impulse reflection, 358 ; techniques, 123 ; tubes, 451

Supersonics, cleaning by, 241 ; intensity measurement by microphone, 451 ; in ore flotation, 344 ; soldering by, 352 ; thickness determination by, 451 ; thickness-measurement gauge, 246 ; wave-speed determination, 451

Surface Finishing, with organics, 243; standards, 442, 443, 444

Surface Hardening, processes, 114 ; processes and electrodes, 117

Surfaces, active components, 355 ; area determination, 360 ; effect on corrosion, 460 ; effect on fatigue strength, 449 ; effect of machining, 442 ; effect of sliding, 246 ; filamentary metal growths, 362 ; film effect on friction, 450 ; film effect on friction and deformation, 450 ; film formation, 246 ; grinding machine, 442 ; heterogeneity, 455 ; layers formation, 360 ; long-period friction effect, 439 ; polishing in metallography, 455 ; profilometry, 241 ; roughness changes in machining, 241 ; roughness determination by electrical resistance, 452 ; roughness study by microscopy, 248 ; spectrographic analysis, 125 ; structural-steel conditioning, 351 ; temperatures in grinding, 119 ; transient-heating mathematics, 358

Sweden, alloy steels, 454 ; Älvdalen ore deposits, 231 ; foundry ventilation, 237; heavy-media mineral separation, 431 ; hot-blast cupolas, 235 ; iron and steel industry, 364 ; moulding-sand standards, 348 ; nodular-iron production, 236 ; ore mining, 343

Switzerland, vacuum melting furnaces, 436

Tammann, G., life and work, 461

Tanks, machining welded rollers, 440

Tar, coal, firing in open-hearth, 107 ; coal, phenol extraction, 345

Tata Iron and Steel Co., coke-oven plant, 102

Taylor Instruments Co., surface-finish standards, 444

Tellurium, effects in cast iron, 454

Temperature Measurement, 103, 232, 345, 432 ; barrier-layer cells, 432 ; flame and gas, 345 ; in flame hardening, 104, 345 ; flames, 103 ; flames by spectral-line reversal, 232 ; by immersion pyrometers, 232, 390 (*Paper*) ; liquid steel, by quick-immersion thermocouple, 387 (*Paper*) ; radiation pyrometers, 103 ; of strip, 104 ; thermocouple calibration at palladium point, 409 (*Paper*) ; thermocouple conduction in sheath, 395 ; thermocouple heating rate, 396, 397, 399 (*Paper*) ; thermocouple thermal error, 397, 432

Temperature Measurement and Control, 103, 232, 345, 432 ; applications, 232 ; for blast-furnace stoves, 103 ; electric-furnace, 104 ; in flame hardening, 238 ; of furnaces, 232 ; in gas-fired furnaces, 232 plating solutions, 345

Tempering, austempering rocket-motor bodies, 237
Tennessee Coal, Iron and Railroad Co., blast-furnace blowers, 234
Tensile Tests, on cast iron, 244 ; effect of specimen length on the strength of a material with random flaws, 56 (*Paper*) ; hot-tearing, 355 ; mild steel, 357 ; of notched-plate specimens, 244 ; notched, of ship plate, 244 ; wrought Mn steel, 435
Testing, 122, 243, 354, 447 ; beams, 454 ; boilers by ultrasonics, 358 ; cast iron, 455 ; castability, by spiral mould, 112 ; castings hot tearing, 113 ; coal and coke, 345 ; coal by dilatometer, 432 ; coal by float-and-sink, 102 ; coatings scratch resistance, 353 ; coke and coal, 345 ; coke reactivity, 345 ; cores, 348 ; degreasing, 352 ; electrical equipment, 239 ; fireclay bricks, 105 ; forgings by ultrasonics, 358 ; grey-iron hot tearing, 355 ; grey-iron machinability, 442 ; grey-iron wear, 450 ; high-temperature materials, 453; ingots by explosion, 249 ; iron ores, 344 ; lubricants, 117 ; metallic materials, 127 (*Book*) ; moulding sand, 111, 348 ; refractories, 233 ; refractories fatigue, 105 ; shaft bending, 448 ; sinter, 231 ; sinter crush and reducibility, 344 ; sinter strength, 344 ; steel castings by Charpy, 448 ; structural steel for brittle fracture, 122 ; techniques, 249 ; weld fatigue, 449 ; weldability, 240, 439 ; weldability, correlations, 440 ; weldability, fillet-type, 440 ; weldability, hot cracking, 440 ; weldability of structural steel, 351 ; weldability, thermal-severity, 440 ; welded seams, 440 ; wire, effect of test-length, 59 ; wire torsion, 245
Testing Machines, 449 ; Amsler, 245 ; calibration equipment, 448 ; creep, 247 ; dynamometers, 239 ; extensometers, 448 ; fatigue, 245 ; fatigue, for refractories, 105 ; at Hanover Fair, 358 ; hardness, 122, 245 ; hardness, Austrian type, 449 ; hardness, Belgian type, 449 ; hardness, Hanemann, 449 ; hardness, Rockwell, 449 ; modern types, 243 ; tension-impact, 244 ; universal, 447
Tests, 122, 243, 354, 447; ageing, by electrical conductivity, 357 ; bend axial load, 245 ; bend on shafts, by Mohr's method, 448 ; brittle-fracture, 122 ; Charpy, of steel castings, 448 ; corrosion, 127 (*Book*), 458 ; corrosion alternating-immersion, 252 ; corrosion, apparatus, 251 ; corrosion, oxygen-consumption determination, 360 ; corrosion, by phenolic foam, 125 ; corrosion salt-spray, 252 ; corrosion surface-area determination, 360 ; creep, on boiler materials, 453 ; creep, constant-stress device, 358 ; creep, machines, 247 ; dead-load, of beams, 454 ; degreasing, 352 ; dilatometric, 244 ; dilatometric, of coals, 432 ; explosion, of ingots, 249 ; fatigue machines, 245 ; fatigue notch-sensitivity criteria, 449 ; fatigue of pipe parts, 448 ; fatigue of pressure-vessel plate, 245 ; fatigue of refractories, 105 ; fatigue, statistical design, 245 ; fatigue, "training" in, 122, 448 ; float-and-sink, of coal, 102 ; hardenability, 245 ; hardenability, Jominy study, 449 ; hardenability, Jominy for weldability, 449 ; hardness, Brinell index, 449 ; hardness eddy-current, 451 ; hardness impact, 245 ; hardness, instruments, 122 ; hardness machines, 245, 449 ; hardness methods, 245 ; hardness, micro, 449 ; hardness problems, 449 ; hardness, prolonged, 357 ; hardness results expression, 122 ; hardness Rockwell, 449 ; hardness Rockwell and Vickers, 449 ; hardness by vacuum-deposited silver layer, 357 ; Vickers, 245, 449 ; hardness, on weld heat-affected zone, 122 ; hot-tearing
Tests—*continued* of castings, 113 ; hot-tearing of grey iron, 355 ; impact. *See* Impact Tests; machinability of grey iron, 442 ; mechanical, 447 ; methods, 243 ; notch-sensitivity high-temperature, 354 ; plasticity, 244 ; radiographic, 247 ; scratch, of coatings, 353 ; significance ratios, 243 ; stress-relaxation, 453 ; stress-rupture, on boiler materials, 453 ; supersonic, of boiler tubes, 358 ; supersonic echo apparatus, 123 ; supersonic flaw detection, 123, 246 ; supersonic, of forgings, 358; supersonic impulse reflection, 358 ; supersonic techniques, 123 ; supersonic, of tubes, 451 ; tensile. *See* Tensile Tests ; torsion of wire, 245 ; toughness, Schnadt method, 244 ; wear, of grey iron, 450 ; weldability, 240, 351, 439, 440 ; X-ray, 247 ; X-ray, of thick parts, 247
Textile Fibres, friction between, 246
Thomas (Richard) and Baldwins, Ltd., bell-type annealing furnaces, 114 ; ingot-mould production, 111
Tin, effect in steel cracking, 355
